instance, she went on corrupting the priesthood; and, either from paffion or from vanity, extended daily, over the fervants of the altar, the dominion of her charms; till, either by pride, or by remorfe of confcience, fhe loft her understanding, and foolishly imagined that the was acting under a divine authority. Some fay, that fhe vindicated her conduct upon the principle, that both parties were free from obligation; but others, and more justly, fay, that the pretended to have feen an angel. This being a crime within the cognizance of the inquifitors, fhe was brought to trial, was convicted, and was burnt.

Excited by this narration, I had the curiofity to vifit the court of the inquifition. It was formerly a convent of the Jefuits, and is fo light and elegant, that I could fcarcely conceive it to contain the dreadful tribunal and gloomy dungeons. I went into the chapel, and the hall of judgment, and ventured to alk fome queftions ; but could obtain no anfwer: filence and folitude feemed to have effablished their dominion there.

The inquifition is certainly lefs formidable now, fince light is every where diffufed, than

Z4

than it was in darker ages, when fuperftition reigned; and the inquifitors of the prefent day, if not more humane, are at leaft more humble, than their predeceffors in remoter periods. Yet we must confess, that, whilft their authority remains, it will he ever fubiect to abuse. Every one knows the hiftory and the fate of Don Pablo Olavidé. The real caufe of his difgrace, was neither his impiety nor his immorality, but his hatred of the monks; who, in return, became his implacable enemies, and never ceafed to perfecute him, till they had banished him from Spain. They never could forget, that in the Sierra Morena he had built his house precisely on the spot where had flood a convent, a convent . which ferved as an afylum for the robbers, with whom the venerable fathers had been accuftomed to divide their plunder. Nor could they forgive his having made it a fundamental law of his new fettlements, that they fhould have no monks. Unfortunately, he had married a rich woman, who. was neither young nor handfome, and, by her means, the monks became acquainted with fuch circumftances as might have otherwife

otherwife efcaped them, and were enabled to treafure up againft him every unguarded expression, which at any time efcaped his lips. This valuable citizen was taken out of his bed, the 14th of November, 1776, and, after being shut up twelve months in the prifon of the inquisition, his fentence was publicly read; all his effects were confifcated for the use of the inquisitors his judges, and he was condemned to eight years confinement in a convent.

It muft be confeffed, that in the perfon of Olavidé, the inquifitors flew at noble game; but, a few years after this, they refembled the eagle, when the ftoops to feed on carrion. The hiftory of this tranfaction is worthy to be recorded. I thall, therefore, give it from the relation of one who was prefent at the Auto de Fé, celebrated in the conventual church of S. Domingo, in Madrid, the 9th of May, 1784, when the whole procefs was publicly read.

The principal actor in this farce was Ignacio Rodriguez, a beggar. The first profession of this man was arms; but of his conduct in that line little has transpired. pired. It is certain, that he was with count O^{c} Reilly in the unfortunate expedition againft Algiers, where he was wounded in the leg. In confequence of this he was difcharged as an invalid, and had an offer of the ufual penfion; but he chofe rather to caft himfelf on the public, and to enjoy his liberty, than to be loft in obfcurity with his companions. For this purpofe, he was careful to keep his wound from healing; and, fuch was his addrefs, that he procured a comfortable living, or rather, as it appeared, fared fumptuouffy every day.

After fome years, he was fo unfortunate as to attract the attention of D. Bernardo Cantero, the intendant general of the police, who, feeing him from day to day, inquired for what reafon he kept his wound open, and ordered him to have it healed. Rodriguez, not knowing to whom he fpoke, replied with infolence, "I afk alms, and not advice." This ill-timed anfwer proved his ruin.

The intendant, ftruck with his appearance, and offended with his infolence, watched him, and having obferved fomething uncommon in a long conversation between between him and a female, called Juliana Lopez, caufed her to be followed, and arrefted. This woman, although artful, being taken by furprife, was confuled, and foon confeffed, that the paper fhe had delivered to the beggar contained fome materials for making love powder. On this evidence Rodriguez was taken into cuftody, with a female named Angela Barrios, who, being a woman of inferior talents, acted under them, and was employed only in commiffions of no great importance. All three being committed to the common jail, were frequently queftioned, and the refult of their examination was laid before the king, who, by the advice of his confessor, referred the matter to the inquifitors. In confequence of this the prifoners were removed, and confined in the prifon of the inquifition.

No tribunal has fuch advantages in tracing out the truth, nor can any other inveftigate a dark transaction with fuch a certainty of fuccels as this court. Unfettered by forms, and not limited for time, they are at liberty to bring whom they please before them, to take them from their beds in the

the middle of the night, to examine them by furprife, to terrify their imaginations. to torment their bodies, to ftretch them on the rack, and to crofs examine them at diftant periods. With these advantages, the impoftor was made to confess the whole of his practices, with all the most minute particulars, and the names of the parties to whom he had fold his powder. He explained, in his confession, the materials of which he had composed it; but these, to a modest ear. fhould never have been mentioned ; and he acknowledged, that every female, after taking it, had been obliged to grant him whatever he chose to alk, without which the charm was to have no effect. Whenever he administered it, he muttered some necromantic formula, that he might give an air of mystery to the transaction, and inspire the mind with confidence in its fuccefs.

Juliana Lopez, his affociate, ferved him as an emiffary and a panegyrift; and that the might in all refpects lend herfelf to his views and to his wifhes, the hired a convenient garden, to which he might retire at all featons, whenever it fuited his convenience.

Angela

- Angela Barrios acted as a fervant to the others, and being of a weak underflanding, was never admitted to their confidence. Fidelity and filence on her part were fometimes however requifite, and in thefe fhe never failed.

The procefs, according to cuftom, contained the moft minute particulars. Their crimes were proved by a multitude of teftimonies, and their guilt was confirmed by their own confeffions. From thefe it appeared, that his powder was adminifered to perfons of all ranks; and one of the inquifitors has fince informed me, that many ladies of high fashion in Madrid were duped by him, although out of tenderness their names had been concealed.

When the process was gone through, the judges refolved to celebrate an Auto de Fé publicly in the church of the Padres del Salvador, but the king would not confent, that the nuns of S. Domingo fhould lofe their privilege of having the Auto in their church. The inquifitors gave way, but fent a request, that the nuns might not be admitted to the grate, left their ears fhould be offended, and the purity of their imaginaimaginations fhould be defiled. This meffage had the effect, which might have been expected. Their curiofity was the more excited, and of all the nuns four only were abfent from the grate.

On the day appointed, at fix in the morning, the people began to affemble in the ftreet of the inquifition, and the troops took their flation to preferve good order. About eight the beggar left his dungeon, leaning on his crutches, and attended by a capuchin friar of no respectable appearance, named Father Cardenas. As foon as he appeared in court, he fell upon his knees before one of the inquifitors, who with the greateft mildness and gentleness addressed him thus: " My fon, you are going to " hear the relation of your crimes, and the " fentence pronounced for the expiation " of your guilt. Our lenity is great, be-" caufe our holy tribunal, always moft in-" dulgent, feeks rather to reform than " punish. Let your forrow flow from " your confcioufnefs of guilt, and not from " a fense of the difgrace you fuffer."

This exhortation ended, which is the fame, even when the criminal is committed to the flames, they proceeded to throw over the fhoulders of the beggar his fan benito, or more properly his *face bendite*, being the fackcloth with S. Andrew's crofs, anciently worn by penitents. On his head they placed the cap with ferpents, lizards, and blackbeetles, a green candle in his hand, and round his neck a halter. To Juliana Lopez the fame fpeech was made, and when fhe had been clothed in fimilar attire, fhe ftood, although not with equal confidence, near to her companion.

Laft of all came forth Angela Barrios, who, trembling and bathed in tears, fell down upon her knees, and begged the inquifitors to fpare her life. She was anfwered, that the holy tribunal was not accuftomed to put any one to death; that they would do her no harm; and that as her offence was not equal to that of her companions, they had not even provided for her a fan benito, the difgraceful badge, by which all, who have worn it, are rendered, with their families, infamous for ever.

When every thing was thus arranged, the proceffion began to move. In front marched foldiers to clear the way; then appeared peared the ftandard of the holy office, fupported by alguazils, and followed by familiars, with the learned doctors of the inquifition; next advanced the beggar, fupported by his crutches, and attended by two fecretaries, who carried the whole procefs in a box lined with velvet; and the little capuchin, as confeffor, with the Marquis of Cogolludo, fon to the Dukeof Medina Cœli, of the blood royal, and the firft nobleman in Spain, as alguazil mayor, brought up the rear.

No fooner had the pageant entered the church than mafs began; after which they read the procefs in the hearing of the whole affembly, which confifted of the principal nobility, with all the ladies of the court, who had been invited by la Marquefa de Cogolludo, and fat with her on a ftage raifed for this occafion.

The fecretaries were frequently interrupted in reading by loud burfts of laughter, in which the beggar joined. The mirth was, however, in fome breafts, attended with a degree of trepidation, when in the procefs circumftances were related, in which ladies who were prefent, had been concerned, concerned, and who expected every moment to be named.

After the whole of the process had been read, the chief inquifitor rang a little bell, and the prifoners drew nigh to hear their That of Ignacio Rodriguez was, fentence. to be whipped through the ftreets of Madrid, to be inftructed and fortified in the mysteries of the catholic faith by a fpiritual guide appointed by the court. with whom he was to go through holy exercises for one month. fafting on the Fridays on bread and water ; and at the end of this period he was to make a general confession. He was to be five years thut up in the penitentiary house of Toledo, and afterwards to be banished for ever from Madrid and from the royal manfions, with an obligation to inform the holy office wherever he should happen to refide. The fentence of the other was not fo fevere.

The whole ceremony ended about three in the afternoon.

The day following, the beggar, naked down to his waift, was mounted on an afs, attended by the Marquis of Cogolludo. Thus accompanied, the imposfor was con-Vol. II. A a ducted ducted through the freets, but without receiving any ftripes; and as he proceeded, he was frequently refreshed by his friends with bifcuits and wine; whilft many, who knew not the nature of his offence, thinking him a heretic, cried out, viva la Virgen, viva Maria purifima, to which he replied, por mi que viva.

This ceremony ended, the Marchionefs of Cogolludo gave a grand entertainment to the judges and officers of the inquifition.

Had it been the intention of the king to make the inquifition, preparatory to its abolition, contemptible in the eyes of the whole nation, he could not have taken any ftep more effectual for the purpole, than he did, when he called upon that tribunal to examine into offences, which should have been infinitely below its notice, and to appear in the proceffion with a wretch, who should have been punified in fecret by the vileft minifter of juffice.

Others have given the hiftory of this execrable tribunal, both as to its origin and progrefs, together with the form of its proceedings, and cruel treatment of its prifoners. foners. Upon these particulars I shall be filent; but I must observe that the original inquisition, armed with dreadful powers, under the appellation of the Spiritual Court, fill exifts in England; where, as in Spain, the poor fuffer most by the abuse of its authority. The servent with us appears to have lost its venom: it is torpid, but not dead, and should, at any future period, our government be changed; it may revive, and be as destructive to our children as it has already been to our progenitors.

In the vicinity of Seville is a curious monument of antiquity, the amphitheatre of Italica, highly worthy the attention of all, who are fond of fuch remains, but to me they were little interefting. It is an oval of two hundred and ninety-one feet by two hundred and four. If we may judge of Italica by the extent of its ruins, it was a confiderable city, and although fo little now is to be feen above the furface of the foil, yet we know that formerly it was a bifhop's fee, and prior to that period, it gave birth to Trajan, to Adrian, and to Theodofius.

The country round the city to a confi-A a 2 derable

[356]

derable diftance lies fo low, that it is frequently overflowed, and upon fome occafions the water has been eight fect high. even in their habitations. The foil is rich, and being at the fame time very deep, its fertility is inexhaustible. The produce is corn, leguminous plants, hemp, flax, lemons, oranges and liquorice. The quantity of this exported from Spain is faid to be annually not lefs than four thousand quintals, or nearly two hundred tons, a confiderable part of which is fuppofed to be purchased by the porter-brewers in London. Could they be prevailed upon to omit the cocculus indicus, they might be permitted to use the liquorice without reftraint.

I had the curiofity to make inquiries at the cuftom-houfe in London, where I found that the principal marts for this produce were formally Italy and French Flanders, but that of late the importation from Spain has rapidly increafed, and that from being only two tons feventeen hundred weight three quarters and fixteen pounds, in the year 1785, it became fifty-eight tons three hundred weight one quarter and fourteen

[357]

teen pounds, in the year 1788. The whole quantity imported, I found to be as follows:

Tons. Cwt. Q". 1b.

1785, into London and the

 109	14	3	18
 128	19	0	16
 183	I	0	17
	150 128	150 2 128 19	128 19 0

In this period the proportion of the outports has increafed from twenty-four tons eleven hundred weight two quarters and twenty-five pounds, to fifty-five tons fourteen hundred weight two quarters and fifteen pounds. From which circumftance we may collect, that London has taught the country brewers the ufe of this innocent and pleafant drug in making porter,

In confequence of vapours and miafmata, occafioned by ftagnant water, and by frequent floods, the inhabitants of Seville and its neighbourhood are fubject to tertians, to putrid fevers, and to hifterical diforders. The pre-difpofition to fuch difeafes may be likewife fought for in the quantity of cucumbers and melons confumed by them all the year, in confequence of which they are A a 3 likewife

likewife infefted with worms, accompanied with epilepfies, efpecially in the more youthful fubjects. This connection I have frequently had occafion to obferve; and, from this circumstance, I comprehend the principle on which an able phyfician is mentioned, in the London Practice of Phylic, to have ordered the powder of tin, in a cafe of epilepfy. Yet, I must acknowledge a fufpicion, that the compiler of that valuable work, who appears to have been fome old apothecary in extensive practice, did not difcover, at the time when he made a memorandum of the cafe, that the phyfician was then prefcribing to the occafional caufe, and not to the difeafe. The fkill of a practitioner is difcerned, not merely by his readinefs in diftinguishing difeases, but by his attention to their pre-difpofing caufes. The empyric, often fatisfied with prefcribing to the fymptom, is liable to be fatally mistaken in his distinctions, and never attempts to investigate the cause. Hence it is, that the publication of formulæ, fuch as those to which I have referred, will never be useful to him, or indeed to any one, who has not been regularly bred 5

bred to the profession. The science of phyfic is not fo eafily acquired as fome have imagined, and have been taught to think by phyficians, who, with the appearance of difinterestedness and candour, have published their systems of domestic medicine. To diftinguish difeases, and to investigate their cause, requires much knowledge, deep reflection, and a natural fagacity, to be improved by reading, and by extensive practice. Even the most skilful and attentive are fometimes miftaken; and at this we fhall not be furprifed, if we confider the vaft variety of difeafes, to which the human frame is fubject. The bare infpection of any fyftem of nofology will be fufficient to convince a reafonable man that the fcience is abstrufe. In the Nofologia Methodica of Sauvage, we find ten claffes, fortythree orders, and more than three hundred genera, in many of which are from ten to twenty fpecies, each diftinguished from the other, and denominated by its occafional caufe. Dr. Cullen has indeed reduced the number both of genera and fpecies, by confidering many of them as fymptomatic of other difeafes, and not as idiopathic : Aa4

[360]

thic; yet even this diffinction fhews more clearly the abftruſeneſs of the ſcience, and how liable they muſt be, who are not perfectly inſtructed, to make miſtakes. I have dwelt upon this ſubject, from a ſirm perſuaſion, that "ſyſtems of domeſtic medicine" have done much miſchieſ to mankind, and that the moſt dangerous idea, which can be impreſſed upon the mind is, that " every man may be his own phyſician." In a country like Spain, a perſon not bred to the proſeſſion may be reduced to the neceſſity of preſctibing to his neighbours; but in England, this practice, unleſs in the cleareſt caſɛs, is much to be condemned.

I have mentioned the difeafes incident to the inhabitants of Seville, arifing from humidity; but others there are which originate in heat. Whenever they have the Solano wind, that is, whenever the wind blows from Africa, they become liable to pleurifies; but what is chiefly complained of, both by phyficians and by magiftrates, is an irritability of nerves, influencing the morals in a variety of ways.

Before I quitted Seville, according to my ufual practice, I enquired into the price of labour labour and provisions. They are as follow:

Day labourers, four reals and an half, or about $10\frac{1}{2}d$.

Carpenters, from feven to eleven reals a day.

Joiners, if good workmen, twenty-four reals, or 4s. od.

Weavers, with diligence, will earn fifteen reals, or 3s.

Bread, from fixteen to twenty-eight quartos, or $4\frac{1}{2}d$. for three pounds of fixteen ounces.

Beef, thirty quartos for thirty-two ounces, or about 4^td. a pound of fixteen ounces.

Mutton, thirty-eight quartos ditto, or $5\frac{11}{2}d$. ditto.

Kid, twenty-four quartos ditto, or $3\frac{2}{5}d$. ditto.

Pork, thirty-fix to forty-two quartos ditto, or $5\frac{1}{16}d$. to $5\frac{1}{12}d$. ditto.

A. D. 1731, the whole confumption of flefh in Seville was one million feven hundred ninety-two thoufand two hundred and feventy-nine pounds; of which the ecclefiaftics had eight hundred eleven thoufand fand and ninety-one pounds, free from taxes; the pounds being here of thirty-two ounces, or two pounds each avoirdupois.

The price of wheat, at different periods, and at different feafons of the year, has been fo remarkable, that I fhall fubjoin a table.

Price of the Fanega of Wheat at Seville.

A. D.	Months.	Reals.		A. D.	Months.	Reals.	
1652.	April	8o to	120	1752.	April	38. 25 to 33	
-	July	42 to	45		July	25 to 33	
1655.	April	14to	20	1755.	April	16 to 22 13 to 18	
	July	13to	17		July	13 to 18	
1657.	April	IIto	18	1757.	April	25 to 29 18 to 27	
	July	16 to	23		July	18 to 27	
1660.	April	45 to	53	1760.	April	29 to 36	
	July	22 to	27		July	30 to 37	
1661.	April	17 to	22	1761.	April	30 to 37	
	July	21 to	28		July	29 to 36 30 to 37 30 to 37 24 to 32	

If we reckon the fanega at one hundred and nine pounds and an half, and the bufhel at feventy, then the higheft price, A. D. 1652, will be equal to 15s. $3\frac{1}{2}d$, the bufhel, and the loweft price, A. D. 1657, to 1s. $4\frac{1}{2}d$. In the corresponding periods, as taken from Smith's Wealth of Nations, the highest price is 75. 6d, and the lowest 3s. 9d. Had the commerce of corn been unrestained, the price in Spain could never have varied in fuch wide extremes, to the destruction of manufactures.

When I had fatisfied my curiofity at Seville, and had refolved next to vifit Cadiz, I fent and hired the cabin of a paffage-boat, which was to leave the city in the evening, and falling down the Guadalquivir, was to arrive in about fix and thirty hours at S. Lucar.

The common price for every paffenger is eight reals, or about 15. 7d. but for the whole cabin I paid twenty reals, or a hard dollar, being a fmall fraction under four fhillings fterling. In this I had no great bargain, becaufe my apartment was not more than fix feet by five, and about three feet high. My only comfort was, that I could firetch myfelf at night upon a bear fkin, and faw myfelf by day feparated from a multitude, fome of whom were not remarkable for cleanlinc?s.

Among the rabble, I observed a young Franciscan Francifcan friar, and a genteel - French merchant, who by no means feemed to be fatisfied with their fituation. At the clofing of the day, the whole affembly joined in the Ave Maria, our young friar taking the lead, and diftinguifhing himfelf by the ftrength and melody of his voice; after which he entertained the company with fome good *fequidillas*, tiranas, and other Spanifh fongs. I was fo well fatisfied with his voice and manner, that in the morning I invited him to my cabin, and was delighted to find in him a pleafant and converfable companion.

The wind was favourable, the fky was clear, and the courfe being nearly in one firaight line, little attention was required to the helm. In fuch circumftances it was not to be wondered at, that our Palinurus, who had been watching all the night, thould be inclined to nod by day. But whilf fleep had taken poffeffion of his eye-lids, his attention feemed to be awake, for when at any time, by the fhifting of the wind, either the direction or degree of preffure of the helm was varied, he inftantly moved his hend, and even before he opened his eyes, 3 he put the veffel right. Thus it is refpecting founds. No noife, however violent, roufes those who are accustomed to hear it; but, if it be unufual, or if it be fuch as would call them to action when awake, although moderate, it makes them start: thus it feems as if the foul was capable of exercising judgment during fleep.

The country all the way, for the fpace of twenty leagues between Seville and S. Lucar, is flat, the foil is deep, and the paftures are covered with a perpetual verdure.

In this little voyage I was fo well pleafed with my young friar, that I bore his expences, agreed to take him for my companion and my guide as far as Cadiz; and, fuch was the confidence I repofed in him, that when we had landed on the beach, and taken horfes to S. Lucar, I committed my baggage to his care, whilf I haftened to pay my compliments to our conful; but, to my aftonifhment, on my return, I found that I had been cherifhing a thief. He would have made an apology; but, as I wanted no explanation, when I had ocular demonfration, I took my leave, without 'reproaching reproaching his ingratitude; and hiring horfes, I made the beft of my way towards Cadiz.

The country is hilly, the foil at a lower level, and near the fea, is fand; but all the intermediate fpace is a ftiff clay, and the road is abominably bad. The diftance is fix leagues.

About mid-way I counted twenty teams of oxen tilling one piece of land. The plough is by no means fuited to the foil, having no fin to the fhare, no coulter, nor any mould-board; but, inftead of the latter, two wooden pins. This, in light fand, may anfwer very well, but is certainly little calculated to fubdue a fubborn clay. The higheft of the hills, expofed to the meridian fun, have vines, and the fcene is often beautifully varied by extensive plantations of the olive.

As foon as I arrived at Puerto de Santa Maria, I enquired for the paffage-boat to Cadiz. They informed me at the pofada, that no wherry would pafs that day. I, however, prefied forward to the beach, where I was foon furrounded by a number of watermen, who all affured me, that I was was come too late for the common paffageboat, but that for two hard dollars I might have a veffel to myfelf. Unwilling to be detained all day, I agreed, and was conducted to a boat half filled with paffengers, and, after waiting near an hour for the full complement, we fet fail. As the wind was fair, we foon made our paffage; and, on quitting the boat, I had the mortification to fee each perfon pay two reals, or four pence halfpenny, inftead of two hard dollars, or eight fhillings; but it was to no purpofe to complain.

CADIZ.

H E city of Cadiz occupies a promontory at the extremity of a peninfula, and is joined to the idle of Leon only by a caufeway. It is wafhed to the eaftward by the gentle waves of a well protected road; but, to the weftward, it is open and exposed to the fury of the occan.

The ftreets are narrow, yet well paved and clean. The moft beautiful part of the city looks towards the *Puerto de Santa Maria*, where the houfes are lofty, built of white free-ftone, and ornamented with painted balconies. They have in front a wide parade, well gravelled, planted with trees, and communicating with the fea-road, where the merchantmen and fhips of war find fhelter.

Two

[369]

Two confiderable fquares, one for the market, the other called *Plaza de San An*tonio, with the *Calle Ancha* joining to it by way of mall, contribute both to beauty and to health; and the whole city being nearly furrounded by a rampart, this forms an elevated, airy, and delightful walk, much frequented in the evenings.

The moft advantageous view of Cadiz and its environs may be had from the fignal tower: from whence you look immediately down upon the houfes, whofe flat roofs, covered with a white cement, have a fingular yet moft pleafing appearance. To the weftward, you command the ocean, with numerous veffels, fome firetching away, others entering the harbour; and, on the land fide, you difcover the four interefting fea-port towns of Rota, Santa Maria, Port Royal, and Caraca, with the ille of Leon, and the connecting caufeway, whilft a rich country, hanging towards the fetting fun, bounds the diftant profpect.

They reckon now in Cadiz, not more than fixty-five thoufand nine hundred and eighty-feven fouls; but, about ten years fince, it is faid to have contained eighty-Vor. II. B b five five thousand, befide about twenty thousand people who entered daily from the sea, and from the adjacent country.

For their pavements, for the cleanlinefs of their freets, for a well regulated police, for fome of their beft edifices, and for many wife inftitutions, they have been indebted to their late governor, Count O'Reilly. Previous to his appointment, this city was remarkable for filth and nafinefs; and from the miftaken clemency of Bucarelli, the former governor, robberics were frequently committed, murders were not uncommon, and fuch was the infolence of thieves, that they gave public warning to the inhabitants, not to make a noife when they fhould be ftopped.

The most diffinguished buildings are the two cathedrals, one ancient, the other not yet finished. The former is chiefly remarkable for fome good pictures, and for its treafures, confisting of jems, filver candlefticks and lamps, both numerous and bulky; three cuftodias, one of which, confuncted of the finest filver, weighs fiftyone arrobas, or more than half a ton; another is mostly of folid gold.

The

The new cathedral is a vaft pile, with large and lofty domes, and many well proportioned pillars; yet the whole appears heavy and difgusting. The effect is owing to the fingle circumftance of its being loaded with a very projecting cornice, fuch as would not be void of elegance in a rotunda of vast dimensions, but by no means fuitable to an edifice, which abounds with angles. All who view this building are ftruck with the abfurdity of these preposterous ornaments, yet the architect wants refolution to retract them. It is not, however, impoffible, that the waves may wipe away this difgrace to tafte, becaufe they have begun their devastations on that fide. and not more than ten feet are interpofed between the building and the fea.

Near to the cathedral is the *Plaza de Toros*, for the bull-feafts, built intirely with wood, making externally a mean appearance; but within, it is both pretty and commodious. I had been folicitous to fee the dexterity of the moft famous matador in Spain, named Romero, but at this feafon the bull-feafts are prohibited.

Not far from hence is the observatory, B b 2 in in a most advantageous fituation; but unfortunately the instruments, although the best that our English artifts of the day could furnish, are neglected, and will foon be ruined.

The academy for the three noble arts of painting, fculpture, and architecture, is at prefent, as a building, fcarcely worthy of attention. It will, however, be removed into the centre of the city, when a fufficient fund can be provided for that purpofe.

In the convents are a few good pictures; more efpecially in the cloifter of the Auguftin friars; and in that of the capuchins we find fome moft worthy of attention, by Murillo. In the garden of the Francifcans is the dragon's-blood-tree, mentioned by Quer, in his Botany of Spain.

Of the three hofpitals, two are moft remarkable for neatners; the third deferves reproach for filth and naftiners; yet this perhaps is the beft conducted for general utility. It is called the Royal or Military Hofpital, becaufe defigned for foldiers, and has fourfcore fundents, who are maintained and educated at the king's expence. It has a good botanical garden, and a theatre for for diffections furnished with fubjects from among the patients. One of the two diftinguished for neatness is fet apart for women; the other, dedicated to San Juan de Dias, and defigned for men, is elegant. All the wards are paved with marble in checkers of black and white; and inftead of white walls, of wainfeoting, or of flucco, the fides are covered with Dutch tiles.

In this hospital, the beds having no curtains, I faw death in all its stages, from its diftant approach to its clofing fcene; from ordinary difeafe to the laft and feebleft ftruggles, to the pale vifage, and the trembling lips of expiring nature. My attention was directed towards each dying object by a crofs at the bed's head, which indicated, that he had received the facraments of the eucharift, and of extreme unction. To one, who had formerly walked an hofpital; to one, whole office leads him to attend the dying and the dead, death must naturally have loft much of its terror; but the view of fo many objects of diftrefs, finking under the preffure of difeafe, I must confess, spread a gloom over my mind, fuch as no one fhould fubject himfelf Bb3

felf to, unlefs he is either called to it in the way of duty, or is bleffed with peculiar fortitude of nerves.

They have commonly in this hofpital more than fix thousand patients, and out of these they annually lose one tenth; but at different seafons the proportion varies.

Befide thefe hofpitals for the fick, there is a retreat for widows, founded by Juan Fragela, a Turkey merchant, born at Damaícus, and fettled at Cadiz, who died A. D. 1756, aged one hundred and four. In this hofpital forty-feven widows have each two good rooms, with a weekly allowance of fix reals. They appear to find in it a comfortable refuge.

The moft interefting eftablifhment in Cadiz, and the beft conducted of its kind in Spain, is the hofpicio, or general workhoufe. This building is large and lofty, handfome and commodious. In it are received the poor of every nation, who are unable to maintain themfelves, and in the firft place, orphans, deferted children, and the aged, who are paffed the capability for labour, the blind, the lame, idiots, and mad people, but effecially priefts, when 9

aged and reduced to poverty. Even ftrangers paffing through the city, with permiffion of the governor, may be entertained two days.

Neatnefs univerfally prevails, and all, who are here received, are clean, well clothed, and have plenty of the beft provifions. Care is taken to inftruct them in the chriftian doctrines, and every fix months the young people are publicly examined. Their education is to read, to write, to caft accounts; and fuch as manifeft abilities, are not only inftructed in the principles of geometry, but, if they are fo inclined, are taught to draw. The boys are trained to weaving, and to various crafts; the girls fpin wool, flax, and cotton; they knit, make lace, or are employed in plain work.

Of the eight hundred and thirty-four paupers provided for at the time of my vifiting this effablifhment, the 21ft of March, 1787, the old men were one hundred and nine, the aged women one hundred and thirty-one, the boys two hundred and thirty-five, the girls one hundred and feventy-one, married people eighteen, idiots and mad people, thirty-four; under cor-B b 4 rection,

rection, men fifty-nine, women thirty-eight; as fervants thirty-nine. The number indeed is perpetually varying; but in the whole of the preceding year, the rations of provision were three hundred twelve thoufand four hundred and nine, which number, divided by three hundred and fixty-five, points out the average to have been eight hundred and fifty-five perfons maintained daily in this house. Forty-five looms, and fixteen flocking frames are provided for their fervice, with a fufficient number of fpinningwheels, working benches, tools for carpenters, turners, shoemakers, and taylors, a twifting mill, a fpinning jenny, and a machine for carding cotton.

To encourage induftry, an account is kept for each individual, wherein he is made debtor to the houfe at the rate of three reals, or about feven-pence a day, and has credit given him for all the work he does, and fhould the balance be, as often happens, in his favour, it is paid to him, whenever he can make it appear, to the fatisfaction of the directors, that he is able to eftablish himfelf without their future aid. I examined the accounts of many, many, who cleared for themfelves more than half a crown a week; and were looking out for fettlements, that they might marry, and gather the fruits of their own induftry.

Adjoining to the houfe is a fpacious fhop for the accommodation of all, who are willing to work, wherein are provided proper implements, and raw materials; and the moment any one has completed his work, he receives the price of his labour, without any deduction; being at liberty not only to lodge, where he pleafes, but to fpend his gains according to his fancy. Here I counted more than feventy young people at their wheels.

But becaufe many, who would work, are indifpenfably confined at home, where, from poverty, they are unable to procure either wheels or wool; the governors provide both, and pay them, without any deduction, for their work. By thefe means, when I was there, of three hundred and forty-eight families, more than five hundred fouls, were trained to induftry. The directors informed me of three children, the eldeft nine years of age, who by fpinning gained fix reals, that is more than fourteen

[378]

fourteen pence a day, and maintained a paralytic father.

Not fatisfied with these exertions, they have established schools in the distant quarters of the city, on the same plan; and, providing the best masters in every branch of business, which they wish to cultivate, they admit freely all, who are defirous of being taught.

It is their intention to pick out from the brighteft of their boys the beft draftfmen, and having inftructed them in the various languages of Europe, to make them travel for the acquifition of knowledge, and the advancement of manufactures.

As the furrounding parifhes may not find it convenient to adopt fimilar inflitutions on a finaller fcale, therefore they receive the infants, the aged, and the infirm, from any of them, on condition of being paid in due proportion for their board.

The management is vefted in twelve directors, who are prefided over by the governor of the city for the time being, with power to fill up of themfelves any vacancy, which may happen in their body. Of thefs, fix take the general overfight of the various departments; the other fix have have each a feparate charge, that every one may enjoy, without another to fhare it with him, the applaufe which his zeal deferves. One is accomptant general; another is treafurer; a third is fteward, to collect the rents, and to manage the revenue; a fourth has the overfight of manufactures; the fifth takes the charge of the provisions; and the fixth provides the raiment.

All their accounts are clear, diftinct, and kept with most minute exactness.

The fources of their revenue are from voluntary contributions; legacies; a tax of one real a fanega on all the wheat brought into the city; and from the produce of labour in the houfe. The whole expence, in the year 1786, was one million three hundred and eighty-five thousand reals, viz.

> 1,385,000 reals vellon. Which,

Which, dividing by one hundred, that is by cutting off two figures from the right, leaves thirteen thousand eight hundred and fifty pounds.

The preceding year the clothing was nearly three times as much ; but the other expences differed little from the year now under examination. If we take the average at eight hundred and fifty perfons, we shall find the food for each amounting to fix hundred and thirty-feven reals, or fix pounds feven shilling and four pence, and the clothes to thirteen shillings and eightpence. But in order to find out the whole expence on account of each individual, we must confider, that during the three years fince the hospicio was first opened, the goods unfold in the magazines amount to four hundred and feventy-three thousand one hundred and fifty-one reals, which being divided by three, gives one hundred and fifty-feven thousand feven hundred and feventeen for the proportion of one year. Now this being deducted from one million three hundred and eighty-five thousand, leaves one million two hundred and twenty-feven thousand two hundred and

and eighty-three as the expence of the public for the year 1786, and this, divided by eight hundred and fifty, gives one thoufand four hundred and forty-three reals, or fourteen pounds eight fhillings and feven pence for the expence of each, not including the produce of his labour.

This accumulation of goods in their magazines arifes from the want of a market. Public bodies being deficient in watchfulnefs, activity, and zeal, labour under this difadvantage, and will never find a vent for their commodities, unlefs at a price greatly inferior to what private manufacturers will be able to obtain. From hence arifes one argument against fuch establishments; but although strong, it is by no means the ftrongeft, becaufe univerfally people in confinement, and deprived of liberty, eat too much, and work too little. This beyond a queftion is the cafe at Cadiz, in the hofpicio, in which they have ninety-two holidays allowed them, and in which the expence of food and raiment is double what it should be.

In the conduct of this eftablishment we find many things highly to be commended, and

and in the first place we must admire the activity and zeal of the directors. That gentlemen of diftinguished talents. and men of bufinefs, fhould be animated with fuch zeal for the public good, as to devote a confiderable portion of their time to it, and affemble every evening to fuperintend this work, can never be fufficiently applauded. In the detail of this bufinefs we difcover not only zeal, but zeal well directed for the best of purposes. Nothing can be more worthy of imitation than the public work-fhop, with the practice of providing wheels and wool for those who are confined at home; nor can any thing more effectually excite the ingenuous mind to industry than the idea, that he shall be rewarded for his pains, and in the iffue reap the fruits of his own exertions. But inafmuch as many among the lower claffes are deftitute of generous fentiments, and as most of them have, by their fupineness, reduced themfelves to diffrefs and poverty; the regulation introduced into one of our workhoufes at Bradford, in Wiltfhire, by a most ingenious manager, may perhaps, and, I apprehend, undoubtedly will, be found preferable

[382]

preferable for general utility. He calculates what every one is capable of earning, without oppreffion, and accordingly appoints the morning and the evening tafk, which must be performed before they either eat or drink. When this task is accomplifhed; whatever more they earn, they immediately receive. From this conduct of the manager, the poor feel confantly the two-fold incentive of hope and fear, which certainly is much better for them than to be under the influence of one motive only, and that more remote. His plan is to receive and to relieve the poor in the hour of diftrefs; but at the fame time to teach them industry, and to get rid of them as foon as poffible.

In certain circumftances it may be wife to take children from their parents, and to educate them in public feminaries; but then it fhould be remembered, that thus trained they are feldom hardy, and that they have never been found to make good domeftics; nor are they qualified to rear a family, like thofe, who have been bred up in cottages, and have, from their infancy, been

[384]

been taught to turn their hands to every kind of work.

To take old people from their families, and, under pretence of providing better for their wants, to rob them of those endearments, and that tender care, which they would have received from their nearest relatives and friends, is cruel in the extreme ; and to leave empty a wretched cottage, or a miserable bed, for the reception of fresh wretchednefs and mifery, is fo far from being either politic or wife, that no conduct can be more remote from wildom and found policy. If, the moment you had provided for the object of diftrefs, you were to pull down the habitation, and fet fire to the bed; if you were to deftroy the neft. which nothing but wretchedness can occupy; the cafe would then be different. The principle on which is built this obfervation, being little underftood, and lefs attended to, I shall endeavour to explain it.

Navigators make mention of an ifland in the South Seas, which, from the firft difcoverer, is called *Juan Fernandez*. In this fequeftered fpot he placed a colony of goats, confifting confifting of one male attended by his female. This happy couple, finding pasture in abundance, could readily obey the first command, to increase and multiply, till in process of time they had replenished their little island. Dampier, vol. i. p. 88. In advancing to this period they were ftrangers to mifery and want, and feemed to glory in . their numbers: but from this unhappy moment they began to fuffer hunger; yet continuing for a time to increase their numbers, had they been endued with reafon, they must have apprehended the extremity of famine. In this fituation the weakeft first gave way, and plenty was again reftored. Thus they fluctuated between happinefs and mifery, and either fuffered want or rejoiced in abundance, according as their numbers were diminished or increased : never at a ftay, yet nearly balancing at all times their quantity of food. This degree of equipoife was from time to time deftroyed, either by epidemical difeafes, or by the arrival of fome veffel in diffrefs. On fuch occafions their numbers were confiderably reduced; but to compensate for this alarm, and to comfort them for the lofs of YOL. II. Cc their

[385]

their companions, the furvivors never failed immediately to meet returning plenty: they were no longer in fear of famine; they ceafed to regard each other with an evil cyc; all had abundance; all were contented; all were happy. Thus, what might have been confidered as misfortunes, proved a fource of comfort; and, to them at leaft, partial evil was univerfal good.

When the Spaniards found that the English privateers reforted to this ifland for provisions, they refolved on the total extirpation of the goats, and for this purpofe they put on fhore a greyhound dog and bitch. Ulloa, b. 2. c. 4. Thefe in their turn increased and multiplied, in proportion to the quantity of food they met with; but in confequence, as the Spaniards had forefeen, the breed of goats diminished. Had they been totally deftroyed, the dogs likewife must have perished. But as many of the goats retired to the craggy rocks, where the dogs could never follow them, defcending only for fhort intervals to feed, with fear and circumfpection, in the vallies, few of thefe, befides the careless and the rafh, became a prey; and none but the most watchful.

[386]

watchful, frong, and active of the dogs could get a fufficiency of food. Thus a new kind of balance was established. The weakeft of both fpecies were among the first to pay the debt of nature; the most active and vigorous preferved their lives. It is the quantity of food which regulates the number of the human fpecies.

If we fuppofe, in a good climate, with plenty of food and healthy habitations, the number of children in each family on the average to be four, and the mean age to which they shall arrive to be fifty years; if the men fhould marry at the age of twentyone, and the women at nineteen, then one couple, at the end of thirty-three years, will leave twelve descendants. In fiftynine years there will be twenty-four perfons; and at the end of one hundred and twenty-nine years, they will be one hundred and eighty-eight, or ninety-four times their first number.

Father Feyjoo relates, that, A. D. 1590, one man and four women, who had efcaped from fhipwreck, landed in the ille of Pines, near Madagafcar, where, finding plenty of good fruit, they became, when difcovered by the

the Dutch, twelve thoufand. Should any one conceive either this fact, as it very probably is, to be miftated, or my fuppofition to go much beyond the mark, he is welcome to reduce the number as low as he pleafes, provided he leaves me in pofferfion of this principle, that in certain circumftances and in given periods, men will multiply in proportion to their food.

We are informed, that the Ifraelites, when they came into Egypt, were feventy fouls; that they remained in the land of Gofhen four hundred and thirty years, and that when they departed, omitting the Levites, the amount of all, that were able to go out to war, was fix hundred and three thoufand five hundred and fifty *males*, of twenty years old and upwards. From thefe data we may conclude, that the Ifraelites doubled their numbers every twentyfeven years, or nearly within that term.

The population in North-America doubles every five and twenty years; but in fome provinces every fifteen years. In modern Europe it requires, according to Dr. Smith, five hundred years to double the number of its inhabitants. The reafon of of this becomes obvious, if we call to mind the principles on which depend the propagation of the fpecies, and the caufes by which its progrefs may be retarded, or altogether limited. Thefe are,

If, Want of food, as on the highlands of Scotland, where a woman will bring twenty children, and rear only two; or in the woods among the hunting tribes; or even in the moft highly cultivated country, when the population is advanced to the utmoft ability of the foil to nourifh, like as in China, where numbers are expofed, and perifh in their infancy, for want of food, and where many are deterred from marriage by the fear of wanting bread.

2d, Difeafes, either peculiar to the climate as at Senegal and at Batavia; or induced, as at Conftantinople, and even in London, by infection, foul air, confinement, and bad nurfing: difeafes not confined to woods, not ravaging the favage tribes alone, but fpreading with more fatal virulence in great, in rich, and in luxurious cities.

3d, Want of commerce for the promotion of industry, and of a market for the furplus of its produce.

Cc3

4th,

4th, War in all its forms, whether carried on by uncultivated or by polifhed nations, either for plunder, for conqueft, or for the extension of commerce.

5th, Superflitious vows imposed on the monaftic orders, and celibacy enjoined the priefthood.

6th, Emigration of the breeding flock, and transference of capitals, arifing either from a bad police, or from a vicious form of government, and the want of that fecurity of perfon and of property which can be enjoyed only where freedom reigns; that is, where men are fure of being protected from the opprefilon of arbitrary power, and are fubject to none but wife and equitable laws.

7th, Want of land, or the opportunity of acquiring it by industry.

8th, Want of habitations.

Now in proportion as you remove these obffacles, your population will advance. When, therefore, it is your object to increase the number of your people; the way to accomplish this will be obvious, and the task in Spain, under a wife government, would be easy; but when the question is, how to banish

banish poverty and wretchedness, boc opus, hie labor eft. Yet in the investigation of this queftion we have one general principle to guide us: increase the quantity of food, or where that is limited, prefcribe bounds to population. In a fully peopled country, to fay, that no one shall fuffer want is abfurd. Could you fupply their wants, you would foon double their numbers, and advance your population ad infinitum, which is contrary to the fuppofition. It is indeed poffible to banish hunger, and to fupply that want at the expence of another; but then you must determine the proportion that fhall marry, becaufe you will have no other way to limit the number of your people. No human efforts will get rid of this dilemma; nor will men ever find a method, either more natural, or better in any respect, than to leave one appetite to regulate another.

Having already enlarged upon this fubject, I fhall here only refer to fuch rules, as may enable us to form a proper judgment of the workhoule in Cadiz.

To infitute public flops, where the industrious may at all times find employ-C c 4 ment, ment, is benevolent and wife: to fupply them at home with implements and raw materials is politic; but to expect a profit from the labour of people in confinement is abfurd.

To fupply the indigent with food and raiment, provided you thereby do not offer a premium to indolence, prodigality, and vice, is falutary.

To correct the lazy and the fpendthrift, to fhut them up in houfes of confinement till they have acquired habits of fobriety and induftry, is both juft and prudent; but in fuch eftablifhments, to feed, to clothe, to lodge them better than the fober and the diligent are lodged, are clothed, are fed, is not agreeable to any principles of equity, and is inconfiftent with found policy.

Upon the grounds already flated, I may venture to predict, that notwithflanding the zeal and efforts of the gentlemen, who fuperintend the general workhoufe at Cadiz, and in fpite of all their wife regulations, unlefs the people in it are compelled to work more, and have lefs to eat; in a courfe of years the city will be nearly as full full of beggars as before the foundation of this houfe was laid. For whilf all the habitations, now recently emptied, remain to receive new tenants in fimilar diffrefs with thofe who quitted them, and whilft fuch a comfortable refuge is at hand for them; indolence, prodigality, and vice will have nothing to fear, but every thing to hope; and the moft improvident will not hefitate to contract thofe bands, on which the propagation of their race depends.

I cannot quit the hofpicio, without taking notice of the kitchen, on account of its fingular furucture. The chimney is an ochagon, in the middle of the room, furrounded by fixteen floves, eight of them large, and contiguous to it, and as many fmall, communicating by means of flues. The larger floves are three feet diameter, by three and an half in depth. Under the kitchen is a cellar to receive the afhes.

The merchants of this city, ever fince the commerce of Peru and Mexico was transported here from Seville, have rifen in confideration; but, in the prefent moment, they have received a fevere shock by the removal of the barrier, which had secured that that monopoly to them. The confequence has been, a glutted market in the Tranf-atlantic colonies, many failures in Cadiz, and not a few in those cities, which have eagerly engaged in new and flattering enterprizes, without fufficient capitals to fland the flock of competition and the heavy loffes inevitable upon the first laying open of an extensive commerce.

The Spanish government has never yet acquired any liberal ideas refpecting trade, and even at the prefent moment, fome of their best political writers refemble lag hounds hunting the fale fcent, whilft the fleeteft are already in poffeffion of the game. Inftead of throwing down every obftacle to commerce, they labour to contract its limits, under the vain hope of eftablifting a monopoly, without confidering either their own want of capital, of induftry, and of an enterprifing fpirit, or the utter impoffibility of preventing fmuggling, whilft other nations, with greater advan+ tages for trade, can underfell them in the market. Until they shall be more enlightened, until they shall have banished their inquifitors, and until the happy period shall arrive,

arrive, when, under the protection of a free government, they fhall have reftored public credit, and placed it on a firm foundation; all their prohibitions, all their feverities exercifed on the property and perfons of the illicit traders, all their commercial treaties, and all their commercial wars, into which ambition may betray them, will be frivolous and vain; becaufe no efforts will ever prevail againft the united interefts of their own fubjects, and of all furrounding nations.

Even at home, the watchfulnefs and energy of government have never been able to enforce its prohibitions; for, notwithflanding thefe, when I was travelling through Spain, all the men appeared in Manchefter cotton goods, and no woman was feen without her muflin veil. In Spain, as throughout Europe, it is found, that when the price of infurance is lefs than the duties impoled on the commodity, no laws are fufficient to controul the operations of illicit traders.

Previous to the year 1720, the commerce of America was confined to Seville, not intentionally, but by a regulation of Charles V. in the year 1529, who, with a view of laying

[396]

laying that commerce open for all his fubjects of Castille, permitted merchants to freight their fhips from the ports of Bifcay, the Afturias, Gallicia, Malaga and Carthagena, provided they returned to Seville; under penalty of death, and confifcation of their cargoes, in cafe of non-compliance with that abfurd injunction. As for the cities belonging to the crown of Arragon, they were wholly excluded from the commerce of America, and could reap no advantage from the newly difcovered continent. In confequence of these regulations, and the heavy duties of twenty per cent. impofed on all goods exported to America, or imported from it, befide the duty of tonnage on the veffels; the contraband trade became fo lucrative, and of course fo extensive in its operations, that little could be carried on to advantage under the fanction of the laws. And the manufacturers of Spain, who A. D. 1545, had fuch a demand for goods, that merchants were happy to engage with them fix years before hand, contracting to take from them all that they could poffibly produce ; thefe fame manufacturers lived to fee the market loft, and were reduced from 3 the

the height of commercial affluence, to penury and want.

A. D. 1720, the emporium was changed, and the commerce, which for two centuries had proved a fource of wealth to Seville, was translated to Cadiz. At the fame time the duties were lowered, and, inftead of twenty per cent. on exports, rated according to their value, all bale goods and boxes paid a fettled tonnage of five reals and an half of plate for the cubic palm, without examination, or any confideration, either of the nature or of the quality of the articles contained in them. The tonnage varied according to a table comprehending the fixteen ports of Spanish America, being different in each. The inexpediency of these regulations is too obvious to escape unnoticed by the reader.

Thefe were not, however, the only miftakes made by the Spanish government in its commerce with the colonies; for, instead of dispatching small vessels frequently, as the market might require; previous to the year 1748, the whole trade was carried on by twenty-feven galleons, and flotas to the number of about twenty-three; the former failing

[398]

failing annually to Porto Bello, the latter, once in three years, to Vera Cruz; the former for the commerce of Peru, the latter for that of Mexico; the fmalleft vefiel being about five hundred and fifty tons, the others from eight hundred to one thoufand.

The galleons first touched at Carthagena for the convenience of the merchants of Popayan and Santa Fé, who brought gold and bezoar ftones, carrying back with them, in exchange, provisions and European goods. But the principal mart was Porto Bello, a town fituated in fuch a barren country, and fubject to fuch noxious vapours, that, except during the annual fair, which lafted forty days, it was deferted. Hither the merchants brought their gold and filver, with Peruvian bark, and Vicuna wool; and beyond this the Spanish trader could not fend his goods, nor could the Peruvians difpose of theirs, upon their own account, in Spain.

The English, by an article in the peace of Utrecht, had the privilege of fending annually a ship of five hundred tons to Porto Bello, loaded with all kinds of merchandife;

dife ; but under covert of this indulgence they commonly freighted one of twice that burthen, accompanied by tenders from Jamaica, with which, when near the port, they exchanged provisions for piece goods; and by that contrivance, ufually carried more articles of commerce than five or fix of the Spanish fleet. From A. D. 1737, the fair, and, together with it, Panama and Porto Bello, have declined. (V. Dampier's and Ulloa's Voyages.)

As long as the court confined the trade of Peru to galleons, it gradually decreafed. infomuch that inftead of employing fifteen thousand tons, it was funk, in the year 1740, to lefs than two thousand. (V. Campomanes Educacion popular.) But no fooner had the marquis de la Enfenada fubfituted register ships in the place of galleons, to proceed directly by Cape Hora to the place of their deftination, than the trade revived; and when, in the year 1765, the barriers were in part removed, and all Spain, the provinces of Bifcay alone excepted, was permitted to fend its productions to Jucatan and the windward islands of Margarita and Trinidad; and when, instead of the duties of

9

of the tonelada and palmeo, only fix per cent. was laid upon all goods exported; the commerce, which had been like the fummer's brook, foon refembled a great river, and enriched all the countries through which it flowed.

In confequence of the benefits which merchants, manufacturers, planters, and the revenue received by the partial removal of these impediments to commerce, government, although reluctantly, at laft (A. D. 1778) agreeable to the remonstrances of Count Campomanes, confented to lay open the trade of America to all its fubjects, those alone excepted, who, not being bound by the general laws of the peninfula, could not fafely be admitted to the enjoyment of this privilege. The inhabitants of Bifcay have, however, no reafon to complain, becaufe they poffefs an ample compenfation for their lofs in the peculiar immunities, which they inherit from their fathers, and more efpecially in the freedom of their ports.

Such have been the general regulations. But Spain, like England, and other nations of Europe, has granted, from time to time, exclusive exclusive privileges to chartered companies, not only to the injury of its citizens at large, and of its manufacturers in particular, but to the oppreffion of those provinces, which have been fubjected to a monopoly. If a country could be found uncivilized, yet free, and abounding with capitals unemployed in trade; or if large fums were required for hazardous undertakings, more than could be raifed on the credit of a private company, in fuch a cafe, the grant of a monopoly, with peculiar privileges, might be endured ; but that a trade, once open, should be confined for the benefit of a few, to the difadvantage of the many, is inconfiftent with every principle of equity, and of commercial policy.

A. D. 1728, Philip V. granted by charter to a company, taking the name of Guipuzcoa, the exclusive trade of Caraccas, in the province of Venezuela, with the privilege of reshipping, by simaller vessel, all its furplus commodities for Cumana and Guayana, with Trinidad and Margarita, two illands at the mouth of the Oronoco, that this company might exchange European goods for gold, filver, hides, cacao, fugar, Vor. II. D d and and fuch other fruits as these countries produced; but in the event, cacao became their ftaple commodity. A. D. 1752, the province of Maracaybo was added to their grant.

This company at first employed twelve veffels to carry on its trade, with nineteen to guard the coaft from fmugglers, varying these numbers as fuited their convenience : and for both these purposes they engaged two thousand five hundred feamen. Such an expence, with the heavy charge of management by directors, fupercargoes, factors, agents, clerks, &c. &c. required confiderable profits, beyond what the private adventurer would have been happy to receive, had the trade been free; and therefore, as was most natural, produced exaction operating against the colonist, a contracted commerce checking the manufacturer at home, and feverities exercifed in vain to reftrain the operations of the illicit trader. (Vide Campomanes Educ. pop.)

The ports they used in Spain were S. Sebastian and Cadiz, into which, in five years, from 1770 to 1774, they imported one one hundred feventy nine thousand one hundred and fifty - fix fanegas of cacao, each fanega being one hundred and ten Cafillian pounds; and by this large importation funk the price of chocolate in Spain to one-half of what it had been before.

The cacao is the fruit of the Theobroma foliis integerrimis, one of the Polyadelphia, Pentandria, and flourishes in America between the tropics, but more efpecially in the province of Venezuela. The fruit grows on the trunk and on the branches, and never fails at any feafon of the year. In Spain they mix fix pounds of the nut with three pounds or three and an half of fugar, feven pods of vanillas, one pound and an half of Indian corn, and half a pound of cinnamon, fix cloves, one drachm of capficum, fome roucou nut, to improve the colour, and a fmall portion of mufk, or ambergris, to give it a pleafant scent. Some people, however, use only the nut, with fugar and cinnamon. The Indians, to one pound of the nut put half a pound of Indian corn, with an equal quantity of fugar, and fome rofe-water. The Dd 2

The vanillas are pods filled with minute feeds, from a parafitical climbing plant, deferibed under the name of *Epidendrum Vanillia*, Sp. Pl. 1347, belonging to the Gynandrous clafs, (v. Pulteney's View of the Writings of Linnæus.)

A. D. 1780, the Carraccas company received the fevereft fhock in the capture of a rich convoy by Lord Rodney, valued at more than two hundred thousand pounds; and a few years after, their capital was abforbed in a new establishment, called the Company of the Philippines.

This company, infituted agreeably to the ideas fuggefted by the Abbé Raynal, in his view of the European fettlements, took its rife in the year 1785, with a capital of twelve hundred thoufand pounds, and with valuable privileges granted to it for a term of twenty-five years. Previous to this eftablifhment, two fhips failed annually, one from Acapulco, a fea-port of Mexico, and croffing the Pacific Ocean, carried the treafures of America to the Philippines; the other, returning by the fame courfe from Manilla, the capital of Luconia, came to Acapulco, where it was met met by veffels from Lima, loaded with cacao, quickfilver, and hard dollars; in barter for which the merchants fent back china ware, fpices, perfumes, filk, callicoes, muflins, and printed linens, the produce of the Eaft.

When the Philippine company began its operations, this traffic ceafed; and now, under the fpecious idea of faving time, with freight and infurance, required in conveying the gold and filver, but chiefly filver, of Peru and Mexico, by Europe to the eaft, thefe precious metals are fent directly weftward to the place of their final defination, whilft the more bulky and perifhable produce of the Eaft, to the fame amount in value, is diverted from its former courfe, and made to deforibe, in the oppofite direction, that fegment of the circle, which had anciently been traced by the filver and the gold.

The Philippine iflands, almost innumerable, and caft up by volcanos, are healthy, fertile, and, befide all the grains of Europe, produce gold, copper, iron, fhip-timber, hemp, alum, falt-petre, cattle, hides, fago, rice, raifins, cacao, fugar, tobacco, wax, fish, and couries, which are the money of D d 3 Indostan.

[406]

Indoftan. Thefe, with the filver, indigo, and cochineal of America, the company barters with the merchants of Afia for muflins, cottons, filks, fpices, tea, quickfilver, and china ware, which, with the fuperabundant produce of the iflands, are now brought by the Cape of Good Hope to Europe, and are admitted under eafy duties into Spain with a drawback of one-third on their exportation.

Nothing could be more flattering to the hopes of the minister, than a plan apparently fo well contrived, and carried on under the aufpices of a most able and enterprising foreigner, who had already fignalized himfelf by the formation of the bank. Yet pleafing as the profpect was, all his hopes, and all the expectations of the nation are upon the point of vanishing. With heavy charges of administration, with every difadvantage in the purchase of commodities, the chief articles of trade are either spoiling for want of a market, or fold to a confiderable lofs. As for tea they never use it; china ware is little in request, and even with us will fcarcely pay the freight; the filks, the muflins, and the cotton goods, whilft they could find purchasers, had a tendency to deftroy

deftroy their favourite manufactures; and now, fince thefe latter articles muft abide the iffue of a fair competition with the Englifh, the company may be faid to have received its mortal wound.

In a country fubject to defpotic power, if the minifter of the day will purchafe confidence, he muft bid high for it; if he will have trading companies incorporated, with commanding capitals, he muft grant them monopolies, with exclusive privileges, inconfiftent with the general good. Yet after all, fuch companies will hold thefe privileges by a moft uncertain tenure, and when they come to balance their accounts, may find, that whilf they flattered themfelves with the hope of gaining more than juft and reafonable intereft for their money, they have loft the capital itfelf.

Should this be the event with the Philippine company, the nation will have reafon to rejoice, and the private merchant may triumph in its fall, not on account of its oftenfibly exclusive privileges, but becaufe the whole of America and of Africa being open to its fpeculations, no limited capitals can ftand a competition with it in D d 4 the

[408]

the market. Had they met with the fupport they had reafon to expect, they muft have fwallowed up the whole trade of Spain and in the iffue have been the ruin of that country.

They have already extended their operations to Vera Cruz, to Buenos Ayres, and to most fea-ports of America, and at the prefent moment they are purchasing flaves on the coaft of Africa. These formerly were fupplied by the English, agreeably to an article in the peace of Utrecht, known by the name of the Affiento. Since the expiration of this grant, various contracts have been made, and among others, one recently with Dawfon and Baker, of Liverpool, who have agreed to furnish three thousand annually to the Spanish islands, and upon this contract have received three hundred thousand pounds for those they have fupplied already.

The treatment of the negroes in the Spanifh fettlements is fo humane, fo wife, fo juft, and fo perfectly agreeable to the principles of political æconomy, that I rejoice in the opportunity of giving to their government the praife, which is fo peculiarly liarly its due. The flave, both in his perfon and his property, is under the protection of the laws, and retains the right of redemption upon equitable terms. Thefe are fettled by arbitrators, the flave having the privilege of choofing one, and the mafter having the nomination of the other; and in cafe of their difagreement, the judge fixes upon a third.

As to acquifition of property, it is rendered eafy to the flave, if he has either induftry, or any defire to be free ; becaufe he may claim the numerous feftivals, befide two hours in the middle of the day, to cultivate his garden, to feed his poultry and his pigs, and to carry his commodities to market. But fuppofing him to be a good fervant, oppreft by a cruel mafter, and not to have acquired fufficient property for his own redemption, it is not uncommon for another planter, being a witness of his fidelity, to lend him money for the purchafe of his freedom, and thus the generous mafter gains a valuable fervant, whilft the flave becomes happy in a master, to whom he can feel himfelf attached. From the apprehension of this, many planters, diftinguifhed guifhed for feverity, are faid to be gentle to those flaves, who by their amiable disposition, or by more than common excellence, have merited attention.

Is not this regulation more beneficial to the whole community, than if all the flaves indiferiminately were reftored to freedom? In the Spanifh iflands its good effects have been experienced to fuch a degree, that moch of the artificers, the tradefinen, and mechanics, are negroes, who by their induftry and frugality, or by their fingular fidelity, have obtained their freedom; and to the credit of this infitution it has been obferved, that two of the beft battalions at the Havannah are composed of blacks, who have been flaves.

It were much to be wifned that we might be warranted, with equal juffice, to beftow commendations on the Spanifh court for liberality of conduct towards the colonies; but unfortunately, the fame fpirit of monopoly prevails in that, as in the other courts of Europe, the fame narrow policy, the fame contracted views; producing both at home and abroad languifhing manufactures, a crippled trade, with poverty manufactures are represented to the second seco and want of population, and in the colonies, difcontents, tending towards difmemberment of empire.

In confequence of oppreffive regulations attempted in Peru, that rich province was well nigh loft to Spain, if its political feparation may be confidered as a lofs. For the Marquis de Sonora, to whofe memory is due much encomium for his removal of impediments to trade, and for many regulations highly beneficial to the commerce of his country, when he attempted to eftablifh in Peru a royal monopoly of tobacco, with fome taxes odious to the people, he kindled the flames of civil war; (A. D. 1781) and had it not been for the indiferetion of the rebellious chief, the event would have been the fame which England experienced upon a fimilar occafion. The leader of this revolt was Tupacamaro, cafique of Arequipa, who, pretending to derive his origin from the facred line and to be descended from the fun, called himself the Ynca. He had met with friendship and protection from the corregidor ; yet he began his revolt by caufing this man to be hanged; and fuch were the numerous inftances ftances of his cruelty and devaltations committed on the perfons and the property of both foes and friends, that many of the Indians joined with government againft him. He was at laft taken prifoner, and hangeds and by his death a period was put to the civil war, yet not till more than two hundred thousand perfons had perified in the conflict.

The minifter of the Indies rendered effential fervice to the mines, by lowering the price of quickfilver from eighty hard dollars to forty-one, that is, to eight pounds four shillings the quintal or hundred weight. The mines of Spain, chiefly that of Almaden, formerly produced a fufficient quantity of this femi-metal for the colonies. They were at that time under the direction of the famous Bowles, an Irishman of fingular abilities, and of fuch integrity, that after having gained millions for the king, his widow has been left to fpend the refidue of her days in poverty. At prefent, Spain can furnish only fixteen thousand quintals, and therefore, to fupply the deficiency, a contract has been made with the count de Greppi, the imperial conful at Cadiz, for twelve

twelve thousand quintals annually, for which government agrees to give fiftythree hard dollars, felling it again at fixtythree. There was indeed a good mine of quickfilver at *Quancavelica*, in Peru; but by covetoufnefs and bad management, it fell in, and was loft. Even after this, UIloa might have re-eftablished it, had he not been fo indiferent as to detect and to oppofe the mal-administration of fome men who were in power.

In confequence of thus reducing the price of quickfilver, and lowering the tribute of gold to one in twenty, and of filver to one in ten, inftead of taking, as formerly, twenty per cent on each, the produce of both increafed, and in Mexico, A. D. 1776, double the ufual quantity of filver was coined, amounting to more than two millions and a half of fterling money.

The whole produce of the Spanish mines in America amounted, in the year 1776, to thirty millions of dollars, or, in sterling, four millions and a half; but in the space of fix years it rose confiderably, and is now flated at five millions four hundred thoufand pounds.

On the first discovery of America, this treasure centered in Spain; and, as far as laws could operate, was confined to the peninfula. The confequence of this was, the ruin of their manufactures at home ; for, as the cortes justly complained to the emperor Charles V. the quantity of gold and filver in stagnation there, raifed the price of labour. (v. Campomanes Educ. popular, part iv. page 112, note 98.) Yet, in procefs of time, the fecret was developed, that no human power can flop the natural progrefs of these precious metals; and Spain, exhaufted of its filver, was overwhelmed with bafe copper money, poured into it from furrounding nations. (v. Campomanes, E. P. part iv. p. 272.)

The fact itfelf is notorious, that the country is defitute of fpecie, at leaft relatively fo; and count Campomanes, with great propriety, points out the real caufes which have produced this effect. As fuch, he ftates the expensive wars carried on in the fupport of foreign dominion; and, in confequence of their having loft their manufactures, the fums expended to purchase from

[415]

from their more industrious neighbours the most common articles of clothing.

In the year 1784, the value of exports to America was as follow, being reduced to pounds fterling:

Spar	nifh produce.	Foreign produce.	Total produce.
	1,438,912	2,182,531	3,621,443
Malaga	196,379	14,301	210,680
Seville	62,713	30,543	93,256
Barcelona	122,631	21,240	143,871
Coruña	64,575	39,962	104,537
Santander	36,715	90,173	126,888
Tortofa	7,669	289	7,958
Canaries	24,974	-	24,974
Gijon	4,281	10,190	14,471
-			Contraction and an other

£.1,958,849 £.2,389,229 £.4,348,078

The duties upon these produced one hundred feventy thousand and eight hundred pounds.

The value of imports from America was as follow, being reduced to fterling.

Cadiz

[416]

	In mon	cy and jewels.	In merchandife.
Cadiz	-	8,297,164	2,990,757
Malaga			18,605
Barcelona	-	102,140	91,233
Corunna	-	741,283	90,001
Santander	-	40,843	100,974
Canaries	-	109;807	52,366
	f.	9,291,237	£.3,343.026

The whole import was $\pounds.12,635,173$, being more than double what was ftated by the abbé Raynal; and the duty upon this amounted to five hundred twenty-feven thousand four hundred and twenty-three pounds.

The various prices of commodities coming from America were, A. D. 1775, in Cadiz, viz.

Cochineal, the beft, from ninety-feven to one hundred and four ducats of eleven reals of plate the arroba, or about fixteen fhillings the pound.

Indigo, from twenty-one to thirty-four reals of plate the pound, the real of plate being four pence halfpenny.

Cacao, from twenty-fix to forty-one dollars the fanega, but moftly at forty. As, 4 therefore, therefore, fixteen fanegas are equal at Cadiz to twenty-five Winchefter bufnels, it may be reckoned at \pounds . 3. 16s. 9d. the bufnel.

Sugar, moderately white, twenty-five reals of plate the arroba, or about four pence halfpenny a pound.

Hides, from Buenos Ayres, Caraccas, and Orinoco, about five pence a pound, or eighteen fhillings the hide when raw; but from the Havannah confiderably lefs.

Vicuña Wool, from Peru, about two pence halfpenny a pound; and from Buenos Ayres, at two pence nearly: but the beft fheeps wool, when wafhed, may be purchafed there for lefs than two and three pence the arroba of twenty-eight pounds.

Cotton, clean, about three fhillings a pound; but as the ifland of Cuba is found to produce it in vaft abundance, the price muft fall confiderably.

Copper, from Mexico and Peru, twentyfour dollars the quintal, or about eight pence a pound, on a fuppofition that one hundred and four pounds Spanish equal one hundred and twelve English. From Chili it is twenty-five per cent. chcaper.

Vol. II. Ee Tin,

Tin, from America, was twenty dollars the quintal, whilf that from England fold for twenty-five; the former being fomething more than fix pence halfpenny per pound. (v. Campomanes, Apend. a la Ed. pop. p. 144.)

Tallow might be brought from Buenos Ayres, where it fells for two and fix pence the barrel of twelve arrobas, or ten pence the hundred weight: but heavy duties check this branch of commerce. (Camp. E. P. p. 333.)

A gentleman from Peru gave me famples of wool which came from two animals each refembling the *Vicuña*, one called *Alipaca*, the other *Llacma*; the latter coarfe, but the former very fine and excellent for hats. It is to be lamented that thefe have not yet found their way into the market.

The whole trade of Cadiz engages about one thousand veffels, of which nearly onetenth are Spanish.

The wines most remarkable in Cadiz are Sherry and Pacarctti, both from Xeres and its vicinity. The former is fold for forty-eight pounds a ton, the latter for fifty-fix; and thefe, when they come to England, England, in the out-ports, pay, cuftoms, fixteen guineas; excife, eleven pounds eighteen fhillings the ton, being four hogfheads or two pipes; in London f_{o} . 2. 16 s. more.

Merchants are liable to peculiar difadvantages in Spain, not only from the nature of the government, which is perfectly defpotic, and from the ignorance, mifinformation, or inattention, too often to be lamented in the beft of minifters, not only by abfurd prohibitions, by monopolies, and by opprefive duties, but by the mifconduct of the provincial governors, who frequently are influenced by mercenary views, in the judgment they pronounce between contending parties.

A late military governor, much favoured by the king, being fupreme in all civil and fifcal caufes, when he was new in office, refufed taking bribes, and ruled his rapacious officers with a rod of iron; but long before he was difgraced, he became infected with the love of money, and received it upon the moft infamous occafions without a blufh. Under his protection, merchants defrauded the revenue, and bankrupts found fhelter E e 2 from from their creditors. This was notorious; yet, when he was recalled, fuch had been his predeceffors, and fuch were they likely to be, who fhould be appointed to fucceed him, that he retired lamented, and carried with him certificates of his good conduct, figned however, chiefly by the monks, whom, previous to his departure, he had much careffed.

On his retreat, his power was divided, and the civil government was administered by the alcaldes mayores of the city, each alternately holding it a week. One of these havings for the trifling confiderations of twenty dollars, granted an order to a creditor in Spain to feize, for his own private benefit, the effects of a bankrupt; the agent of other creditors in England, taking the alcalde by the hand, with forty dollars, readily procured a reverfal of the order, and thus purchafed fubfiantial juffice for his employers.

Another alcalde having promifed, for one hundred dollars, not to grant an attachment to a perfon, who had pretensions to fome property, yet granted it, and being reproached for his conduct, replied with coolnefs,

coolnefs, " How could I avoid it, when " he gave me forty dollars ? but be not un-" eafy, for to-morrow I will take off the " attachment."

Obnoxious to fuch abufes, how can commerce flourish ?

The province of Andalufia, watered throughout its whole extent by the Guadalquivir, if properly cultivated, fhould produce corn fufficient, not only for its own confumption, but for exportation. Yet the wheat annually imported is little lefs than one million and an half of fanegas; the fanega being commonly one hundred weight, but at Cadiz, about three pounds lefs. Nearly one half this quantity, in the year 1787, came from Africa; eighty-five thousand fanegas were imported from America, and the remainder was furnished by Naples, Sicily, and Sardinia; the whole amount that year being one million four hundred and forty-eight thousand fanegas.

It is remarkable, that though they have an opportunity of conftructing tide-mills, yet, for want of thefe, they grind their corn with mules, which cofts them ten reals, or Ee 3 two

[422]

two shillings nearly, per quintal or fanega.

To prevent a fcarcity of corn, and to make a profit by the fale of it, the city has eftablifhed a public granary, from which the bakers are fupplied at a given price; and, according to that, the magiftrates regulate the affize of bread. I vifited this vaft repofitory, and was much furprifed to fee the heaps of wheat full of all kinds of trumpery, not only barley, but vetches of various kinds, and a variety of noxious feeds. Had the grain been winnowed by the machine now in common ufe all over Scotland, it would have been more beautiful to the eye, and much more wholefome for their food.

When I had fatisfied my curiofity in viewing and contemplating the articles of commerce, under the protection of a friend, with whom I had fpent much time at Madrid, I made a little excurfion to fee the arfenals at the Caraca. Cadiz itfelf is ftrongly fortified towards the fea by rocks, and, on the land fide, by works erected at a vaft expence. Beyond thefe are market gardens on the ftrand, watered by norias; and and here begins the narrow caufeway leading to the idle of Leon, which is an extenfive flat, uncultivated, and fearcely fufceptible of cultivation. Although barren, it produces confiderable profit by the numerous falt-pools, which require very little trouble or expence; becaufe the fun and air quickly occafion the water to evaporate, leaving the falt cryftallized.

The village of Port Royal, through which we pafied, is one long fireet, well paved, and very pretty. Here my curiofity prompted me to vifit M. de Langara, who gave me a polite reception. Pleafed with his countenance and manner, I moft fincerely pitied his misfortunes.

Ever fince the war, the exertions of Spain have been inceffant to render her marine refpectable; but more efpecially at the time when I was there, all was in motion, and the minifter of the marine was making the most firenuous efforts to equip a formidable fleet. This was done to vindicate their claims upon the Mosfquito fhore, although that territory was never fubject to the crown of Spain, and the independent princes, who have dominion there, E e 4 had

[424]

had been for ages in alliance with the Englifh nation.

When I returned to England, I examined the nature and extent of the fettlement which caufed fo much uneafinefs to Spain. It confifted of no more than five hundred and fixty-nine freemen, including the women and their children, with one thousand feven hundred and fixty-three black flaves, and two hundred and four head of cattle. The uncafine's arole, therefore, not from the number of the fettlers, but from their contraband trade; from their communication with the Mofquitos, who, in time of war, had been used to moleft the Spaniards; and from the apprehenfion that, by their means, the English, in some future war, might eftablish themselves in force on the lake of Nicaragua.

This fettlement was certainly valuable to England as the connecting medium between Jamaica and the Spanifh Main for the exchange of our manufactures with Guatimala againft indigo, cochineal, filver, and hard dollars. Indeed the indigo, growing wild on all that coaft, yields the beft commodity, and no country produces finer § fugarfugar-canes. The infant colony made about a hundred and fifty hogsheads in one year; but being obliged to pay the foreign duty in England, the mills were fuffered to decay. Mahogany was a principal article of their commerce; and of this the annual export was about three million feet. Befide thefe articles, they fent to England four tons of turtle-shells, paying a duty of one fhilling a pound, with a hundred and twenty thousand pounds weight of farfaparilla, the duty of which, at feven pence a pound, was three thousand five hundred pounds; a fum more than fufficient to difcharge all the expences of this new fettlement.

Such was the value of our poficitions on the Mofquito Shore, that neither the minifter who figned the preliminaries of peace at the clofe of a difaftrous war, nor his immediate fucceflor in office, who ratified that peace, would agree to their relinquifhment; yet, in the year 1787, the fettlement was evacuated, and our moft faithful allies were abandoned to the mercy of their inveterate enemies.

The magazines at the Caraca, all well arranged, are full of ftores, and new docks have been constructed at a vast expence, for, being funk in a bed of foft clay and loam, they are confequently difficult to conftruct. and require unremitted labour to keep them dry. For this purpofe they use chain pumps, to the number of fixteen, each worked by eight men, who alternately pump four hours, and reft eight. Thefe are criminals, moftly fmugglers, condemned to this painful fervice, fome for three, others for feven, and not a few for fourteen years. The fmugglers are, however, diftinguished from the thieves by a fingle chain, whilft the latter carry two. In this dock-yard alone are a thoufand of those miferable creatures. I obferved here a practice worthy of imitation. To preferve their ftore mafts from the worms, from the wind, and from the fun, they are buried in fand, and by this fimple method are preferved for many years.

In order to fhew how much their naval power has advanced in the fpace of a few years, I fhall fubjoin a ftatement of their 9 marine marine as it flood in the years 1776 and 1788.

I take no notice of the fmaller frigates, they being of trifling importance.

By this flatement it is evident, that in twelve years the naval force of Spain has been nearly doubled, confidering merely the guns; but when we take into confideration the number of their leading thips; in point of refpectability, it will appear to be much more than doubled; and if we pay attention either to the views of government, or to the peculiar tafte and difpolition of the new fovereign, we may conclude that no expence pence will be spared, nor the most watchful attention wanting, to render their navy still more formidable. In the summer of 1790 their fleet of observation confisted of twenty-eight ships of the line, among which were four ships of 112: beside these, they had fix of the line stationed in the Mediterranean, and a strong fleet in America.

It is a queftion worthy of difcufiion, whether Spain ought to aim at being diftinguished as a naval power; or whether the fums annually expended with that view would not be more profitably employed in exciting industry, by opening communications, promoting agriculture, cherishing manufactures, encouraging trade, and by adopting every plan, followed by the moft enlightened nations, to facilitate commercial intercourfe. Should the adhere to the colonifing fystem, a powerful navy will be needful to protect her commerce, and to fecure her monopolies; but then it should be inquired, will the proportion of trade obtained, beyond what fhe would enjoy, if the had loft her authority over thefe diftant provinces, or if their trade was free, pay

pay the expence of arming thus in times of peace, and of employing fuch a multitude of revenue officers to guard extensive coafts? but more especially, will it indemnify her for all the commercial wars, in which the may be engaged to support her trade?

Thefe are queftions proper to be refolved; and her beft politicians think, that fhewould be richer and more powerful without colonies. If their opinion is well, founded, it is abfurd to expend to much upon their navy.

No country can boaft greater advantages for trade than Spain; and even without a fingle fhip fhe might be powerful and rich. Her wine, brandy, raifins, figs, almonds, oranges, and nuts; her olives, oil, foapafhes and foap; her filks, linens and cottons, were they properly encouraged, with the fineft wool, not omitting the *efparto*, fo valuable for cables, &cc. her iron, fuperior in quality to that of other countries, with tin, lead, and copper in abundance; to which might be added her furplus corn, were the land in proper tillage; all thefe productions of the foil, with the

the manufactures, which, under a good government, must naturally find establishment in Spain, would be fuch a never-failing fource of wealth, that fhould any of the furrounding nations with to difturb her peace, the could have no caufe to fear, becaufe upon a well-peopled, compact, and united empire, no lafting impreffion can be made. But fuppofing Spain, with fuch advantages of foil and climate, producing fuch a rich variety of articles for trade, without exhaufting colonies, armed for felf-defence, but not infpiring either jealoufy or fear, fhould confine her views wholly to domeftic industry; which of all her neighbours could feel any inclination to moleft her ? In fuch circumstances must not every one of them. rejoice in her prosperity ?

War, among the rude inhabitants of infant countries, has only plunder for its object. This kind of depredation a well-difciplined people have no need to dread; and among the civilized it has been long fince forgotten. But the flames of war have been too often kindled among polifhed nations, with a view to conqueft; and projects of ambition tion have feldom failed to fpring from wealth and power. Yet the more enlightened begin to fee the folly of fuch purfuits; and all, who are fkilled in political arithmetic, are able to demonstrate their inexpediency. Not to mention the expence of conquest, both in men and money, it is found by experience, that an empire, not merely when possible distant provinces, but as it extends its limits beyond certain bounds, becomes proportionably weak. Whenever this truth shall be universally acknowledged, only one fource of devastation will remain.

At prefent, the greateft danger to the profperity of Europe is from commercial wars. But when the colonies, ftill fubjugated to the European powers, fhall caft off the yoke, and the commercial nations, better acquainted with their true intereft, thall duly cultivate the arts of peace, this fource of contention will be dried up, and the only furviving conteft will be that of induftry; or, in the language of the eaft, men will beat their fivers into pruninghooks.

The

The benefits arifing to mankind from this fpecies of contention, are deferibed by Hefiod, with fuch beautiful fimplicity, that I shall take the liberty to quote him.

A twofold envy, kindling twofold ftrife, Marks the vicifitudes of human life. On widely different principles they move; Who hates the one, the other must approve. Parent the one, of fierce protracted jars, To man, predefined fource of endlefs wars. Night, fable goddefs, gave the better birth, By Saturn wooed in lonely caves of earth. This fpurs the lazy on to noble deeds, While the bright flame just emulation feeds. The idle neighbour of the growing great Envies that fource of wealth, which forms his flate. Who plants, who fows, with him in both to vie, Shall find fome mimic mortal ever nigh. Pregnant with good this mild contention lives ; By her each meager artift eats and thrives : Beggar on brother beggars keeps his eye, And learns from them his humble fuit to ply. E'en poets, kindling at another's name, Subdue their hunger by purfuit of fame. Perfes, these precepts, which my lines impart. Grave on the living tablet of thine heart. Nor let that worfe ambition fire thy mind, To join the mad purfaits of mad mankind : To whom enough from Ceres golden flore Earth yields for prefent day, but yields not more.

With
